Professional Summary

Innovative Frontend Engineer with 4.9 years of experience architecting enterprise SaaS platforms, multi-tenant payroll systems, and interactive admin dashboards using ReactJS, TypeScript, NextJS, and Redux Toolkit. Highly proficient in accelerating production engineering workflows and code optimization using generative development tools like Cursor AI and GitHub Copilot. Adept at building scalable RBAC security models, integrating secure financial data pipelines, and transforming complex business requirements into high-performance web applications.

Technical Skills

- **Frontend Technologies:** ReactJS, TypeScript, JavaScript, NextJS, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Bootstrap, Material UI
- **Backend & APIs:** NodeJS, ExpressJS, REST APIs, MongoDB, SQL, Django
- **AI-Driven Development:** Cursor AI, GitHub Copilot, Prompt Engineering, AI-Augmented Development, AI-Assisted Debugging, AI-Based Refactoring, Rapid Prototyping with LLM Workflows
- **Architecture & Engineering:** Reusable Component Architecture, State Management, RBAC, API Integration, Authentication Flows, Enterprise Dashboard Systems, Responsive Design, Modular Frontend Architecture
- **Tools:** Git, GitHub, Axios, Vite, Postman

Professional Experience

Frontend Engineer

Quantian Technologies

Aug 2024 – May 2026

Pune, Maharashtra

- Engineered scalable multi-tenant frontend modules supporting complex attendance, payroll metrics, and operational dashboards, improving UI loading performance by 70%.
- Built enterprise-grade workforce management workflows using ReactJS, TypeScript, and Redux Toolkit, increasing user experience metrics by 60%.
- Developed flexible RBAC-enabled routing architecture for nested organization hierarchy and department-level security access.
- Implemented reusable custom API integration layouts using Axios, unifying state management protocols across features.
- Used Cursor AI extensively for automated feature generation, scaffolding complex layouts, code refactoring, and accelerating delivery speed by 40%.
- Secured core financial operational flows including secure bank file uploads, automated penny-test verification, and batch disbursement tracking systems.

Software Engineer - Frontend

Datart Infotech

Apr 2023 – Jun 2024

- Developed responsive ReactJS applications and modern modular UI kits for data-intensive business platforms, slashing component rendering bottlenecks by 35%.
- Integrated decoupled REST APIs and configured reactive workflows for complex data-driven analytics tracking.
- Collaborated with UX designers and backend engineers to enhance interface interactivity, boosting active user adoption by 45%.

Software Developer

Sterling Systems Pvt. Ltd.

Apr 2022 – Mar 2023

- Programmed fully responsive consumer-facing web architectures using ReactJS, modern JavaScript, and Tailwind CSS templates.
- Implemented frontend application layers, continuous API optimizations, and cross-browser stability adjustments.
- Diagnosed production bugs and reduced technical errors, maintaining a 99.2% application uptime rating.

Junior Web Developer

Jul 2021 – Feb 2022

AMS WAVE Pvt. Ltd.

- Built clean, performance-optimized interface layouts using baseline HTML5, CSS3, JavaScript configurations, and ReactJS states.
- Maintained cross-device visual consistency, patched responsive media-query bugs, and built reusable baseline structural layouts.

Enterprise Projects

Optick Web – Workforce & Operations Management Platform

- Built an end-to-end operational hub managing corporate payroll models, employee life cycles, invoice tracking, and customer ticketing structures, driving a 50% uplift in back-office processing efficiency.
- Engineered dynamic administrative panels with automated RBAC security parameters.

Technologies: ReactJS, TypeScript, Redux Toolkit, Tailwind CSS, Axios, REST APIs, Cursor AI

Money Movement – Payroll & Disbursement Platform

- Architected high-throughput batch disbursement processing channels and transaction monitoring dashboards, achieving a 99.9% success rate on large financial file parsing pipelines.
- Streamlined asset distribution flows utilizing Cursor AI-assisted code generation paradigms.

Technologies: ReactJS, Redux Toolkit, Tailwind CSS, REST APIs, Cursor AI

Business Loan EMI Calculator – Fintech Client

- Built high-performance client math systems for dynamic interest modeling, reducing calculation feedback latency to sub-10ms intervals.

Technologies: ReactJS, JavaScript, CSS3

Education

Bachelor of Technology (B.Tech.) – Electronics and Telecommunication Engineering
Sanjay Bhokare Group of Institutes, Miraj

Jun 2021

Additional Highlights

- Nearly 5 years of verified professional experience engineering performant modern web layers.
- Successfully deployed core functionality across 20+ scaling, real-world corporate platforms.
- Proficient in modern generative development workflows, utilizing LLM environments for rapid architecture generation.
